Abbas Saleh

Civil Engineering Student | Toronto Metropolitan University | Autodesk Certified User – Revit

(647) 674-5424 • abbas.k.saleh@gmail.com • linkedin.com/in/abbas-saleh-0a9540368 • **Portfolio: abbassaleh.com** • Mississauga, ON

Results-driven Civil Engineering undergraduate with hands-on site and coordination experience. Proficient in structural analysis, engineering design verification, and industry-standard modeling software.

Education

Toronto Metropolitan University — Toronto, ON

Bachelor of Engineering, Civil Engineering — *Sept. 2025 – Apr. 2029 (expected)*

- **Coursework:** Strength of Materials I & II, Graphics, Materials Science; **current:** Fluid Mechanics, Surveying, Probability & Statistics, Engineering Communication

Skills and Certifications

Analysis: Autodesk Robot Structural Analysis, Mathcad Prime, Microsoft Excel, hand-calculation verification
Drafting & Modelling: AutoCAD, Revit (schedules, model review)
Certifications: Autodesk Certified User – Revit (Oct. 2026); Working at Heights (Ontario), Worker H&S Awareness (MLTSD), WHMIS (CCOHS), Aug. 2026

Experience

Project Coordinator — June 2026 – Sept. 2026

Bay & York Development Group — *Toronto, ON*

- **Multi-Discipline Coordination:** Served as the primary technical liaison across five consulting disciplines (structural, civil, geotechnical, planning, landscape) and legal counsel for a 182-unit mixed-use development comprising two multi-storey buildings and 15,400 sq. ft. of commercial space.
- **Retaining Wall Value Engineering:** Partnered with Gravity Engineering to resolve municipal compliance concerns regarding an existing retaining wall; coordinated technical drawing reviews that successfully integrated the retaining structure into the underground parking layout, eliminating a separate replacement wall and reducing project complexity.
- **Submission Tracking:** Tracked consultant deliverables, municipal comments and design revisions across multiple submission cycles; issued agendas and action logs and closed each item with the responsible licensed professional.

Engineering Intern — Apr. 2026 – June 2026

Zee Design & Build Inc. — *Greater Toronto Area, ON*

- **Structural Design Exposure:** Followed the principal P.Eng. through beam and slab calculations for a medical building, then saw the slab built on site.
- **Reinforced Concrete Construction:** Tied reinforcing steel, built formwork, and placed and finished concrete for the slab under site safety procedures.
- **AutoCAD Drafting:** Revised interior renovation plans in AutoCAD under the P.Eng.'s direction.

Projects

Maintenance Platform: Verification Package | *Mathcad, Excel, Robot, AutoCAD, Revit* — Oct. 2026

- Analyzed a steel access platform (W-section beams, joists, HSS posts) under dead, live and equipment loads, checking beam bending, shear and deflection and post buckling, with guard loads cited and flagged for review.
- Verified results by independent hand calculation in Mathcad, an Excel calculation sheet and a Robot frame model, reconciling all differences; one input sheet records units, assumptions and sources.
- Issued AutoCAD framing plans, sections and general notes under revision control; built an independent Revit model and logged drawing-to-model discrepancies in a review register, closing each in the next revision.
- Prepared an Excel material takeoff reconciled to the Revit steel schedule.
- Issued for P.Eng. review; comments logged and next revision in progress. Brief states limits (elastic analysis, not a CSA S16 design check).

Conveyor Gallery Truss: Member Force Verification | *Robot, AutoCAD, Excel* — Oct. 2026

- Hand-solved representative members of a Pratt conveyor gallery truss by method of joints and a section cut through the governing panel, matching a Robot Structural Analysis model exactly; checked serviceability deflection, drew the elevation in AutoCAD and prepared a material take-off.

Literature Review: Modular Access Platforms vs. Scaffolding in Hydropower Maintenance — Oct. 2026

- Compared fall-hazard exposure, installation time and inspection effort using a case study, Ontario fall-protection rules and injury data; ends in questions for senior decision.
