Abbas Saleh

Civil Engineering Student | Toronto Metropolitan University
(647) 674-5424 • abbas.k.saleh@gmail.com • linkedin.com/in/abbas-saleh-0a9540368 • **abbassaleh.com** • Mississauga, ON

Education

Toronto Metropolitan University Toronto, ON
Bachelor of Engineering, Civil Engineering *Sept. 2025 – Apr. 2029 (expected)*

- **Coursework:** Strength of Materials I & II (CVL 320, 420), Graphics (CVL 207), Materials Science Fundamentals (MTL 200); **current:** Fluid Mechanics, Fundamentals of Surveying, Probability and Statistics, Communication in the Engineering Professions

Skills and Certifications

Analysis: Autodesk Robot Structural Analysis, SAP2000, Mathcad Prime, Microsoft Excel, hand-calculation verification
Codes: CSA S16 (steel member checks), NBC 2020 Part 4 (loads and load combinations)
Drafting & Modelling: AutoCAD, Revit (schedules, model review)
Certifications: Autodesk Certified User – Revit (Oct. 2026); Working at Heights (Ontario); Worker H&S Awareness (MLTSD); WHMIS (CCOHS), all Aug. 2026; Ontario Full G Driver's Licence

Experience

Project Coordinator June 2026 – Sept. 2026
Bay & York Development Group *Toronto, ON*

- **Consultant Coordination:** Coordinated five consulting disciplines (structural, civil, geotechnical, planning, landscape) on a mixed-use development of two multi-storey buildings with about 182 residential and seniors-living units and 15,400 sq. ft. of commercial space; prepared meeting agendas and action logs.
- **Retaining Wall Compliance:** Coordinated drawing review rounds between the structural consultant (Gravity Engineering) and the project team on a municipal compliance issue at an existing retaining wall; the final design integrated the wall into the underground parking structure.
- **Submission Tracking:** Tracked consultant deliverables, municipal comments and design revisions across multiple submission cycles, and closed each action item with the responsible licensed professional.

Engineering Intern Apr. 2026 – June 2026
Zee Design & Build Inc. *Greater Toronto Area, ON*

- **Structural Design Exposure:** Followed the principal P.Eng. through beam and slab calculations for a medical building, then saw the slab built on site.
- **Reinforced Concrete Construction:** Tied reinforcing steel, built formwork, and placed and finished concrete for the slab under site safety procedures.
- **AutoCAD Drafting:** Revised interior renovation plans in AutoCAD under the P.Eng.'s direction.

Projects

Maintenance Platform Verification | *Mathcad, Excel, Robot, AutoCAD, Revit* Oct. 2026

- Verified a steel access platform (W-shape beams and joists, HSS posts, angle X-bracing) under dead, live and equipment loads; Mathcad hand calculations, an Excel calculation sheet and a Robot frame model agreed on all gravity forces within 2%.
- Remodelled the bracing as tension-only and added CSA S16 notional loads and NBC guard loads; showed the braces carry no gravity load, correcting an earlier modelling finding, and matched hand-calculated brace and post forces to Robot within 0.2%.
- Checked every member to CSA S16 in Mathcad (bending with lateral-torsional buckling, shear, compression, tension, brace end bolt); identified a Class 4 joist flange and checked it with an effective section.
- Produced AutoCAD framing plans, sections and notes, a Revit model reconciled to the steel schedule, and an Excel material take-off; kept a review register and revised the package through three rounds of P.Eng. review.

Conveyor Gallery Truss: Member Force Verification | *Robot, AutoCAD, Excel* Oct. 2026

- Hand-solved seven members of a Pratt conveyor gallery truss by the method of joints and a section cut through the governing panel, confirming the Robot member forces; checked serviceability deflection, drew the elevation in AutoCAD and prepared a material take-off.

Literature Review: Maintenance Access in Hydropower Plants Oct. 2026

- Compared fall-hazard exposure, installation time and inspection effort using a case study, Ontario fall-protection rules and injury data; found worker safety the strongest case for a permanent platform, but no source quantified the benefit.
